

Dosage. of 1 mg/kg. Malpractice, Errors and Litigation.

Concluding that such a plan can be designed and implemented using the standard of care for a pediatric critical care team, the Texas Supreme Court declined to hear the petition for discretionary review in June 2015.

of percentage survival, less than 50% of all patients treated with G-CSF-mobilized peripheral blood progenitor cells (PBSC) will achieve engraftment. . Birth of an infant of 35 weeks' gestation. use of the methods described herein to obtain and fractionate human milk, in accordance with the process described herein, can be the basis of a milk-based infant formula for premature infants. Hueco Tanks The Hueco Tanks or H-2 are a series of three earthen mounds, or mounds of earth, that have been found in the Hueco Tanks State Historic Site, located in West Texas. In 1981, the site was declared a National Historic Landmark by the National Park Service. Geology and description The mounds are the remains of three earthen pits that were used in the construction of a fortified wall. The site was an overland route used by the Tejas (an alternate name for the

---

Comanche) tribe to travel from the West Texas plains to their homelands in northern Mexico. In 1968, the site was listed on the National Register of Historic Places. In 1972, the earthen mounds were declared a National Historic Landmark by the National Park Service. The Hueco Tanks are located on of private land in Kinney County, Texas, north of the city of San Angelo. The site is on land owned by the family of William G. Sears, founder of the Dallas Cowboys. Each of the three mounds was in a different location. There was a small hill in the center, with two earthen mounds, one on each side. The center mound was about long, high, and wide at its base. The mounds are earthen, constructed of dirt, sand, and gravel. They are rectangular, with rounded corners and flat tops. The sides were about high. The mounds were covered by grass. There are three approaches to the site: from the east, the west, and from the southeast. Each of the approaches is accessible via a road. They lead to the mounds. At the bottom of the
