In Theaters. More information on George Lucas' work can be found at [www.nola.com](http://www.nola.com). Those pages, in turn, lead to a list of other pages, with the homepages for the individual media sites of a few other, more well-known special effects houses, such as Industrial Light and Magic, which is best known for their work on the Star Wars films. (Indeed, one of their homepages links to a Wikipedia entry for "Industrial Light and Magic" in a sub-section called "Special effects houses"). With this in mind, I gave "ILM" a try, and a page came up with a short biography of ILM, and a link to their FAQ. After reading that, it occurred to me that I had actually read an ILM page before - it's a sequence of pages that come up if you type "ILM" into the search box on the right side of the Wikipedia home page. This sequence of pages is itself the result of a page stubbing, which is a method that Wikipedia uses to generate new pages. A: Wikipedia in general can be good for newbie's as well. I would never had discovered certain parts of the site without it. Also, it's a vast encyclopedia; you will surely find a lot of information about films you never heard of. Just do the best to read the articles before you write a answer. A: Wikipedia is the primary reference for anyone who wants to learn about film in general. The credits are in-depth, with links to relevant information, both on and off Wikipedia. It is also a great place to start learning about a film before watching the movie itself. It is important to note that it is NOT exhaustive. Some movies have a lot of credits, some a few. And some movies have credits on Wikipedia and no credits in the actual movie itself. So don't be discouraged if Wikipedia doesn't have all the information you're looking for. With diligence and a bit of luck, you'll be able to find that information. A great aspect of Wikipedia is the ability to go through the information and find what you need. This is so valuable that Wikipedia provides an index which will bring you directly to the information you seek without having to browse all of the articles. Q: android SQLite ColumnType I'm using SQLiteOpenHelper to retrieve data from the database, this 2d92ce491b
