.Applied Mathematics for the Business, Economics and Social Sciences, Frank S. Budnick. Solutions Manual PDF Free Solution For Applied Mathematics Of Business Economics And Social Science. Solution Manual For Applied Mathematics Of Business Economics And Social Science. Q: Ion vs ionic: why two names? What is the difference between the two? A: If you search on the net, you will find some answers: The name Ionic is a combination of "ion" and "framework" - "ion" for the HTTP library, and "framework" for the overall framework. Found on Ionic framework/documentation Ionic is a framework that allows you to make applications on the Android, iOS and Windows 8/RT platforms. It has a nice and easy to use build tool called Cordova. Found on Ionic framework/documentation There are also some more detail and tutorials available on this page A: Ionic is a combination of Ionic and cordova. Cordova allows you to write apps using HTML5 and CSS3, which gets translated to native APIs for the respective platforms. Ionic is an framework, which makes it easy for you to build and run app. Q: ¿Por qué el uso de if no es lo mismo en python que el uso de lo mismo en otras lenguajes como PHP? Estoy aprendiendo a programar en python, tengo un pequeño problema al parecer soy incapaz de entender por qué no funciona la comparación entre variables, con los mismos datos que en php. Si estoy comparando datos de dos variables: `if(v1 > v2)`: Por ejemplo, tengo los valores 10 y 20 en mi variable v1 y v2, y quiero que en el if haga una verificación como la de php, pero en el if solo me imprime false, por qué no me muestra un valor positivo? A: Ten en cuenta que comparando en Python (implementaciones) es otra cosa que comparar en PHP (implementaciones). En Python hay comparaciones que
