I am using the following code: `import csv import sys headers = ["Name","Email","Company","Phone","Comments","Expiry"] csvFile = "file.csv" with open(csvFile, 'wb') as csv_file: writer = csv.writer(csv_file) row = [row[0],row[1],row[2],row[3],row[4]] writer.writerow(row) with open(csvFile, 'rb') as csv_file: readCSV = csv.reader(csv_file, delimiter=',', quotechar='') for row in readCSV: print(row) This is the resulting output: ['Name', 'Email', 'Company', 'Phone', 'Comments', 'Expiry'] ['Ann', 'xyz@gmail.com', 'abc Inc', '95443545','something','something'] ['Mary', 'klm@gmail.com', 'abc Inc', '2345656','something','something'] ['John', 'abc@gmail.com', 'xyz Inc', '456665666','something','something']` Traceback (most recent call last): File "main.py", line 23, in for row in readCSV: IndexError: list index out of range Any help is appreciated. A: You shouldn't need to specify the delimiter in this case. If it's an empty row, as your output shows, you should get a single row, so no need to specify delimiter. Your code should be as simple as this: `with open(csvFile, 'wb') as csv_file: writer = csv.writer(csv_file) writer.writerow(row) with open(csvFile, 'rb') as csv_file: readCSV = csv.reader(csv_file, delimiter=',') for row in readCSV: print(row)`
