

I'm getting the "The server cannot process the request due to an invalid signature" error even though I've already created the certificate on the server and installed it on the client. What am I doing wrong here? A: It was an authentication error, not a signature error. My certificate hadn't been correctly installed in the client and was not in the trusted list, so the client was asking for a secure connection to the server. I used the "Import private key" option in the menu "Tools" > "Settings", then selected the certificate as the key. MySQL 5.1.17 Released - stablemap ===== rbanffy MySQL is just getting good. As a long-time user of MySQL and Oracle, I have always been looking for a good open source RDBMS, but have always ended up using Oracle for bigger projects. Even though I'm pretty happy with MySQL, Oracle is still my favorite. Good stuff, and some people will move to MariaDB. ~~~ pyre > _Even though I'm pretty happy with MySQL, Oracle is still my favorite_ That's a good thing though, right? ~~~ rbanffy I believe the parent meant that, even though it's getting better, you should still choose Oracle. ~~~ gaius You've been playing with different RDBMSes and you haven't yet learned that? :-) ~~~ pyre I never got around to writing the full 10,000 word blog post about why Oracle is better than MySQL, but I'll have to take another stab at it. I've also tried Postgres and I like it, but I haven't used it for any longer than a couple of weeks and it isn't used on any projects I'm working on. ~~~ rbanffy PostgreSQL is still a very good database, and the documentation is excellent. It is the only one where a student could easily start writing an extension that would be accepted into the base database. ~~~ rbanffy I might not have been clear enough, but Oracle is still the best choice for getting started. ----- shabda It is
