can not be disregarded that the project is made by professionals. Additionally, the various options for the customization of the theme, such as the introduction of customization options can be downloaded. The website builder also allows the user to test and update the content of the website.

upload and store all data safely, and the site can be changed on the fly. The new website builder in the field of HTML is a serious competitor to other, well-known websites that offer similar services. A comparison with other templates that are currently on the market shows that the new website builder is still missing some features that other templates have
