W. W. Norton & Company: This is a recognized legal dictionary with definitions which can be translated into English and French with the click of a button. Good results can be shown with a variety of different sites, but mainly on the website of the American College Dictionary. This is still far from what all French speaking people expect from a dictionary on the Internet. So how can we do better? Dependence of pinhole X-ray beam size on source-image distance and pulsed electric fields. We have studied the increase in pinhole beam size when a monochromatic X-ray source and detector are moved toward or away from each other. We measured beam sizes as functions of source-image distance (SID) and pulsed electric field strength (PEFS) and determined the data in terms of a single parameter that depends on SID, PEFS, and source power.The present invention relates to a ball and socket joint having two ball-like parts and a socket-like part which are connected to one another via a spherical surface of the ball-like part and a spherical surface of the socket-like part. In such a ball-and-socket joint, the spherical surface of the ball-like part is pressed against the spherical surface of the socket-like part during use. In this process, the ball-like part is rotatably set in the socket-like part. In this case, a wall section adjacent to the spherical surface of the ball-like part is provided with a distance-reducing lip which projects in the axial direction. In the fitted condition, this distance-reducing lip presses the spherical surface of the ball-like part onto the spherical surface of the socket-like part, i.e., the ball-like part is clamped against the socket-like part. This has the effect of reducing the play between the ball-like part and the socket-like part. In addition, from EP-A-0 927 392 (U.S. Pat. No. 6,273,488), it is known to use so-called “metal balls,” which consist of a metallic core and an outer layer of a light metal. Such “metal balls” are used as bearing balls, rollers or rollers in a rolling bearing. The problem of the invention is to improve a ball-and-socket joint of the type mentioned above and to be able to further reduce the play

Previously, studies have used fully or partially inactivated SARS-CoV to prevent the infection and spread of SARS-CoV in cell culture. Inactivated SARS-CoV at 10^−4^ dilution (50 ng/mL) showed significantly less (\~10-fold) infectivity than live virus (1,000 TCID~50~) \[[@B18]\]. Similarly, inactivated SARS-CoV at 10^−4^ dilution (1 ng/mL) showed significantly less (\~100-fold) infectivity than live virus (1,000 TCID~50~) \[[@B19]\]. However, more recent studies demonstrated that inactivated SARS-CoV at 10^−8^ dilution (16.7 ng/mL) showed an infectivity titer of \~10^4^ TCID~50~ \[[@B20]\]. In another recent study, inactivated SARS-CoV at 10^−6^ dilution (200 ng/mL) showed an infectivity titer of \~10^6.5^ TCID~50~ \[[@B21]\]. Our results with partially inactivated SARS-CoV at 10^−6^ dilution (200 ng/mL) showed an infectivity titer of \~10^4 3da54e8ca3
